

Jordan Misseos

Aerospace Design and Simulation Engineer

Professional Summary

Aerospace engineer with international industry experience in naval platform systems engineering (Ghenova/Navantia, Spain) and a strong foundation in **CFD** and structural **FEA**. Currently completing a Master of Aerospace Engineering at RMIT University. Australian citizen eligible for Defence security clearance.

Experience

Design Engineer Intern

Ghenova / Navantia

Nov 2024 – Feb 2025

Las Palmas, Spain

- Produced production-ready technical drawings in **FORAN**, applying **GD&T**, weld symbols, and naval tolerancing standards.
- Designed **3D CAD** models of ship outfitting components (profiles, stiffeners, frames, and panels) in **CATIA V5** and **FORAN**, ensuring compliance with manufacturing constraints and classification standards.
- Collaborated across mechanical, structural, and outfitting engineering disciplines within a **Windchill PLM** environment, attending design reviews and ensuring documentation compliance with naval classification standards.

Department Team Lead – Foods

Costco Wholesale

Nov 2022 – Current

Epping, Australia

- **Leading** a team of 6–10 across daily operations: stock rotation, date code compliance, and new stock integration. All while striving to minimise shrinkage and ensuring merchandise standards.
- Transitioning to Liquor Department Lead, demonstrating **adaptability** and consistent recognition of leadership performance within a high-volume wholesale environment.

Projects

CFD Analysis of Submarine Sail

RMIT University – Undergraduate Lead Simulation Engineer

Mar 2025 – Nov 2025

Melbourne, Australia

- Led a 4-person research team investigating Reynolds number effects on unsteady hydrodynamic loads and vortex shedding of a BB2 submarine sail, by developing high-fidelity URANS and LES simulations in ANSYS Fluent.
- Delivered an industry-standard **technical report** with design recommendations to reduce flow-induced fatigue and hydroacoustic noise by translating complex simulation outputs into actionable engineering decisions.

CLA 45 Strut Brace Design and Analysis

Static Structural Analysis - FEA, Analytical Stress Verification, CAD-to-Simulation Workflow

Mar 2026 – Current

- Designed a Mercedes-Benz CLA 45 AMG strut tower brace in **Fusion**, establishing a fixed-free cantilever load case and performing analytical stress verification under a 6,000 N applied load.
- Conducted static structural **FEA** validation in **ANSYS Mechanical** to verify hand calculation results and assess the structural performance of the rectangular tube section geometry.

Embedded Motion Control System

Arduino-Based Robotic Arm – Servo Controlled

Jun 2026 – Current

- Constructing a 6-DOF robotic arm using an **Arduino Uno** and PLA **3D-printed** components, implementing joystick-based servo control to develop practical skills in embedded systems, electronics, and mechatronics.

Education

Master of Aerospace Engineering

RMIT University

Mar 2026 – Exp Dec 2026

Melbourne, Australia

- Coursework spanning aerospace design optimisation, advanced manufacturing, project management, and aircraft maintenance systems, building on Honours-level simulation and structural analysis capabilities.

Bachelor of Aerospace Engineering (Honours)

RMIT University

Mar 2022 – Dec 2025

Melbourne, Australia

HARD SKILLS

- MATLAB / Simulink / C / C++
- Ansys / Abaqus
- Fusion 360 / CATIA V5 / FORAN / SolidWorks
- FDM 3D Printing (PLA, PETG)

SOFT SKILLS

- Leadership & Team Management
- Technical Report Writing
- Time Management
